# List of Figures

# Chapter 1

## Product information

### 1.1 Identification

Include precise information of the software product like identification name (that you can include in the [Glossary](#)), list of parts that compose it (indicating identification numbers for each part). Specify the applicable operating environment(s), including version(s) of hardware, communications, and operating system(s).

### 1.2 Copyright

### 1.3 Trademark notices

### 1.4 Restrictions

Restrictions on copying or distributing the software and its associated documentation.

### 1.5 Warranties

### 1.6 Contractual obligations

### 1.7 Disclaimers

### 1.8 Contact

Information for contacting the issuing organization.

# Chapter 2

## Introduction

### 2.1 Scope

This section has to provide the scope of the user's manual document. In the following some opening statements to use when providing the information corresponding to this section.

This document provides ...

This document does not ...

This document is not ...

This document may be used with ...

### 2.2 Purpose

In this section you explain the purpose (i.e. aim, objectives) of the user's manual. In the following some examples of opening statements to be used in this section.

The purpose of this document is ...

This document defines ...

This document is meant to ...

### 2.3 Intended audience

Description of the categories of persons targeted by this document together with the description of how they are expected to exploit the content of the document.

### 2.4 *MySystem (v1.0)*

Brief overview of the software application domain and main purpose. Our app is a epidemic crisis management web based project.

#### 2.4.1 *Actors & Functionalities*

Overview of all the *actors* interacting with the software being them either humans (called end-users in the standard [1]) or not. For each actor, describe the main software functions that are offered to him. Structure of this sub-section MUST be by actor/functionalities.

### ***2.4.2 Operating environment***

Brief overview of the infrastructure on which the software is deployed and used.

## **2.5 Document structure**

Information on how this document is organised and it is expected to be used. Recommendations on which members of the audience should consult which sections of the document, and explanations about the used notation (i.e. description of formats and conventions) must also be provided.

# Chapter 3

## Usage Guide

This section is aimed at describing the general use of the software. Such information is grouped by the different kinds of actors. Such actors are expected to use the software to perform some processes or workflows (called here procedures) using the concerned software (**including installation procedures**).

The description of the processes should be organised to facilitate learning by presenting simpler, more common, or initial processes before more complex, less utilised, or subsequent processes.

Common procedures should be presented once to avoid redundancy when they are used in more complex procedures.

Each process has to be documented using the following use-case textual description template [2] **BUT its content must be as low level as possible with actual values:**

---

**Use Case:** ProcessMissionOne

**Scope:** Crisis Management System (*CMS*)

**Primary Actor:** Coordinator John

**Secondary Actor:** FirstAidWorker Bob,  
ExternalResourceSystem (*ERS*)

**Intention:** The intention of the Coordinator is to process mission with ID equal to 1.

**Level:** Sub-functional level

**Main Success Scenario :**

1. *John* instructs the *CMS* to process a specific mission.
2. *CMS* selects the internal worker *Bob* to execute the mission.
3. *CMS* instructs '*Bob* to behave as *FAW*.
4. *Bob* informs to the *CMS* of his arrival.
5. *Bob* executes the mission.
6. *Bob* informs to the *CMS* the mission outcome.

**Extensions :**

- 2.a None internal worker can execute the mission.
    - 2.a.1 *CMS* requests an external resource to *ERS*.
    - 2.a.2 *ERS* informs *CMS* that the request can be processed.
- Use case continues at step 3.

---

*Remark :* Graphical User Interfaces (GUIs): include GUIs screenshots to show the different stages of the process while its is performed by the actor.

### 3.1 Actors common procedures

Common procedures to several actors are grouped in this section to avoid redundancy.

### ***3.1.1 MyCommonProcedure1***

### ***3.1.2 MyCommonProcedure2***

## **3.2 My-Actor1 procedures**

### ***3.2.1 MyProcedure1***

### ***3.2.2 MyProcedure2***

## **3.3 My-Actor2 procedures**

### ***3.3.1 MyProcedure1***

### ***3.3.2 MyProcedure2***

## **3.4 My-Actor3 procedures**

### ***3.4.1 MyProcedure1***

### ***3.4.2 MyProcedure2***

## Chapter 4

# Software operations

Explain each allowed software operations (i.e. an atomic unit of treatment, a service, a functionality) including a brief description of the operation, required parameters, optional parameters, default options, required steps to trigger the operation, assumptions upon request of the operation and expected results of executing such operation. Describe how to recognise that the operation has successfully been executed or abnormally terminated. The template given below (i.e. section 4.1 has to be used).

Group the operations devoted to the needs of specific actors. Common operations to several actors may be grouped and presented once to avoid redundancy.

### 4.1 MyOperation

The system operator creates and adds a new crisis to the system after being informed by a third party (citizen, organization) and selects a crisis handler for the crisis.

**Parameters:** Reporter Personal Information, Crisis Information, Crisis Handler

**Precondition:** The system operator is logged in and has received information from a reporter.

**Post-condition:** A new crisis has been added to the system and the new crisis has been assigned to a crisis handler, the Handler has received an automatic notification from the system.

**Output messages:** The selected Crisis Handler will be notified automatically once the crisis has been created.

**Triggering:**

1. From within the crisis management window fill out the required entries related to the personal information of the reporter such as name and phone number.
2. Fill out the entries related to the crisis type, impacted area, priority, description, GPS coordinates, address and finally choose a Crisis Handler from the combo box.
3. Click on the “Submit” button in and add the entry to the database.

#### 4.1.1 MyExample1

Examples should illustrate the use of **complex operations**.

Each example must show how the actor uses the software operation under description to achieve (at least one of) its expected outcome.

It might be required to include GUI screenshots to illustrate the example.

## Chapter 5

# Error messages and problem resolutions

All known problems in using the software should be listed and explained in details using the structure presented below.

Contact information for reporting any problems (either with the software or this document) should be clearly indicated

### 5.1 Error message 1

#### *5.1.1 Problem identification*

A description explaining the meaning of the faced problem.

#### *5.1.2 Probable cause*

A description explaining the reasons why such a problem has been raised.

#### *5.1.3 Corrective actions*

Describe the required steps the actor should take to recover from such situation.

# Appendix A

## Title of the appendix 1

Here you write the context of the appendix, structuring such content in sections, sub-sections and sub-sub-sections, if needed.

An example of appendix is the flat presentation of all the graphical user interface screens. Each screen can be presented (identification symbol and description) and screens transition graph can be given.

### A.1 My Section

Description of the section.

#### *A.1.1 My subSection*

##### A.1.1.1 My subSubSection
